

Garbrook Introduces the 2010 Advanced Biofuels Resource with Business Intelligence Tools

Customers in the renewable energy sector enjoy streamlined information access from one-stop knowledgebase on all generations of biofuels.

BEVERLY, Massachusetts -- January 1, 2010: Garbrook today introduced the 2010 Advanced Biofuels Resource (ABR), an upgraded version of its online knowledgebase that summarizes scientific, technical, commercial, environmental, and policy information on all generations of biofuels. The enhanced product features the US Ethanol and Biodiesel Mega Tables that provide subscribers easy access to condensed, actionable information on biofuel plants and projects. The Mega Tables are refreshed daily and link to the deeper knowledge contained in the biofuels knowledgebase as well as the original sources. They can be sorted and downloaded.

The new release also includes a redesign of Garbrook's daily e-mail updates, concise news of the day and important discoveries as identified by the Garbrook Curation team. These e-mails now include industry metrics for rapid identification of biofuels market trends and changes.

"The new 2010 ABR features business intelligence tools that customers need to either enter or advance their position in the biofuels industry," said Dr. James Garrels, Garbrook's Chief Executive Officer. "With these new tools and website enhancements, subscribers will access the range of information they need in a more efficient manner."

2010 ABR subscribers have direct access to a knowledgebase containing over 5,000 summary pages on biofuels topics. Garbrook's expert curators have distilled and organized the facts from over 50,000 online and hard-copy articles and reports to build a resource that cuts through the clutter, redundancy, and bias found in much of the online media. It profiles the activity of over 3,400 companies including traditional industries, start-ups, current renewable energy producers, major investors, and construction and supply.

About Garbrook: Garbrook Knowledge Resources, Inc. was founded in 2005 to develop curated knowledgebases for complex global issues at the intersection of science, technology, business, and public policy. Using their background as pioneers in biological curation, Drs. James Garrels and Joan Brooks founded the company to develop an authoritative knowledgebase for the Renewable Energy field. The Advanced Biofuels Resource (ABR), Garbrook's premier product, is a knowledgebase that simplifies and accelerates research, analysis, and decision-making. The ABR currently covers algal biofuels, cellulosic biofuels, biofuels developed through synthetic biology, as well as first-generation bioethanol and biodiesel.
